## 12 Week Scope and Sequence for K–5 Students

The following scope and sequence outlines 12 weeks of literacy and math lessons that you can use with your child to help guide learning at home. Each day will include grade-level lessons to support what your child is learning at school. These lessons are designed to be done independently by K-5-aged students, although we recognize every child's experience may vary. Some of these lessons may be easier than others, which is fine, as review of past material allows your student to practice valuable skills.
